# TEXTILE ARCHITECTURE

Textile architecture redefines outdoor spaces with versatile and functional solutions that adapt to projects of various scales. From facades to covers and tensile structures, these applications bring innovation and design to sports stadiums, urban spaces, shopping centres, and recreational areas, creating unique and sustainable environments.

---

*Lightweight solutions that redefine architectural creativity and reduce the environmental impact of large projects, backed by over 40 years of expertise.*

# TEXTILE FACADES

IASO's textile facades transform architectural surfaces into functional and aesthetic elements. Designed to optimise energy efficiency, provide sun shading, and create visually striking spaces, these solutions offer a unique combination of lightness, durability, and versatility. Adapted to projects of various scales, textile façades are an ideal choice for those seeking innovation without compromising design.

## APPLICATIONS

- Shopping centres
- Stadiums and sports venues
- Cultural spaces such as museums and auditoriums
- Public and commercial infrastructures
- Parkings
- Industrial buildings
- Renovation of structures
- Residential

---

# TENSILE STRUCTURES

IASO's tensile structures represent the perfect fusion of art and engineering. Using PVC or PTFE fabrics, we create dynamic shapes that not only capture attention but also provide practical solutions for covering large surfaces with reduced structural costs. Our experience and collaboration with renowned architects and engineers allow us to deliver unique projects that seamlessly integrate into any environment.

## APPLICATIONS

- Urban spaces
- Theme parks
- Shopping centres
- Stadiums and sports venues
- Hospitality
- Residential

---

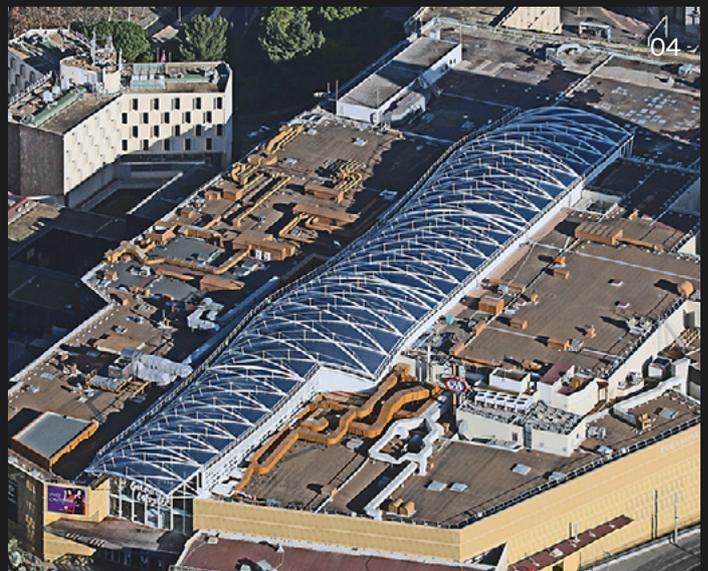

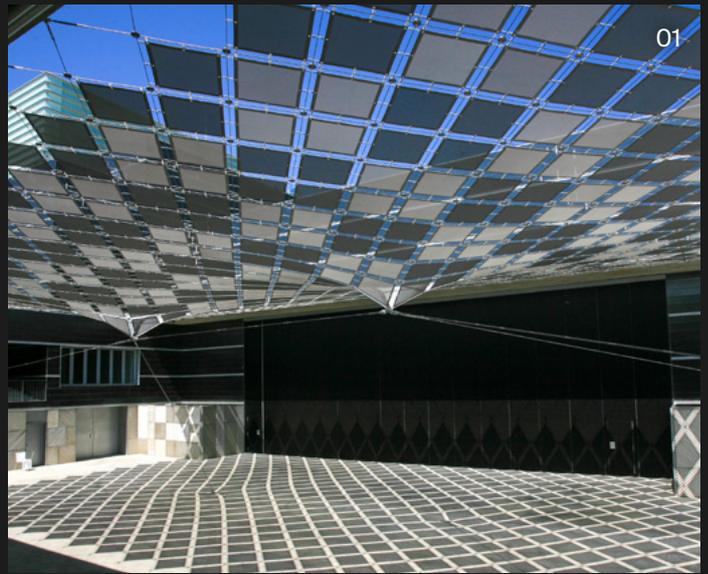

# ETFE

ETFE is an advanced architectural solution that enhances light, space, and design while reducing the impact of even the most demanding projects. This unique material, known for its transparency and lightness, transforms facades and covers into functional and aesthetic elements that seamlessly integrate into any environment. From single-layer applications to five-layer cushions, ETFE offers an unparalleled level of versatility, adapting to the technical and creative demands of contemporary architecture.

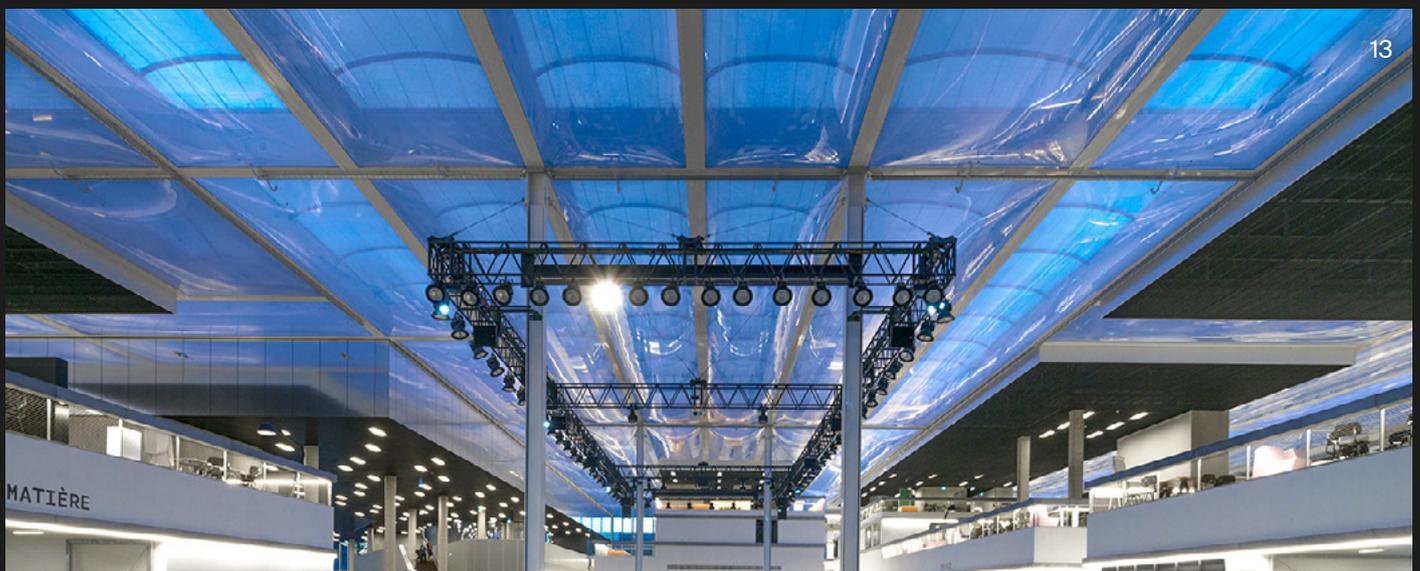

## APPLICATIONS

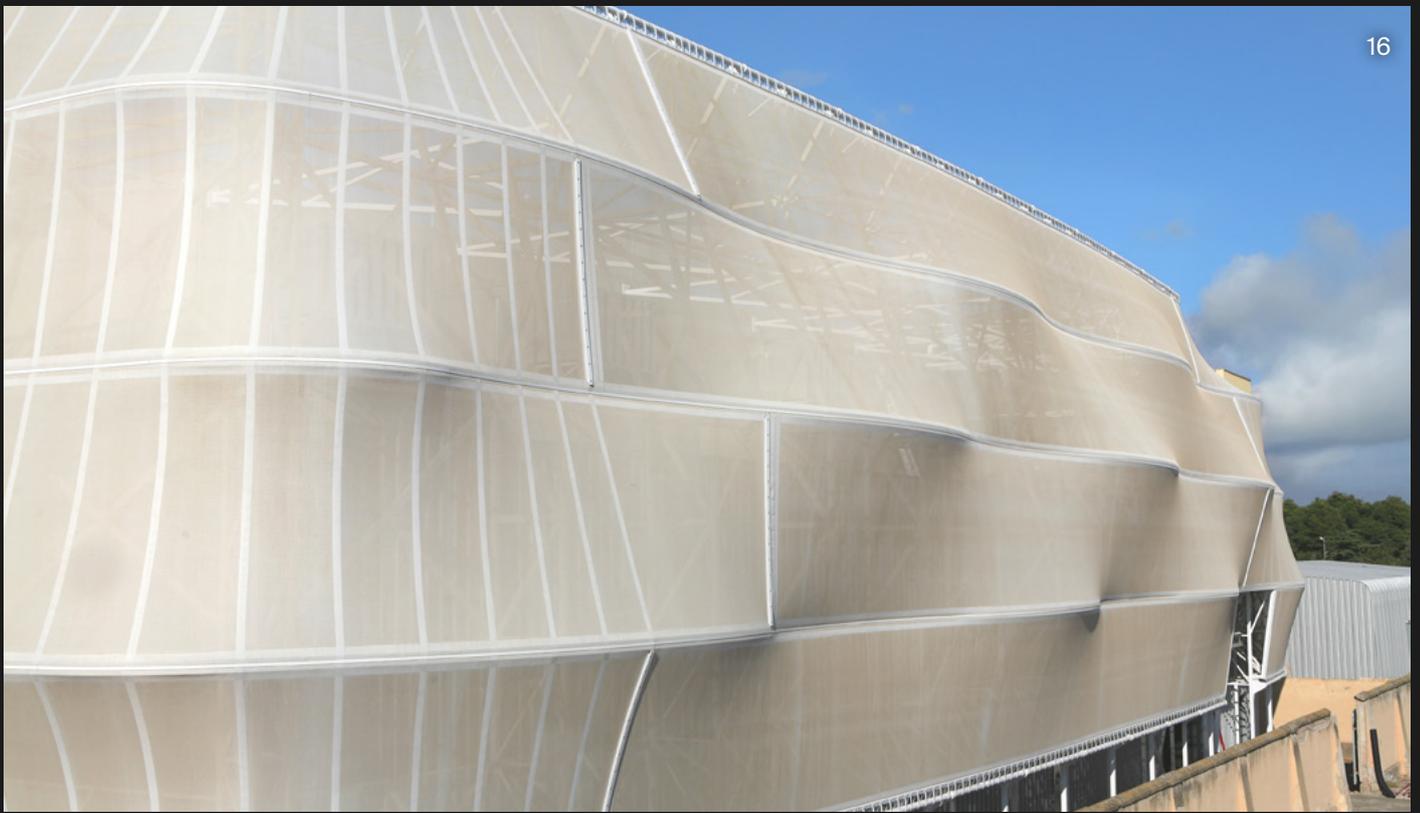

- Shopping centres
- Stadiums and sports venues
- Cultural spaces such as museums and auditoriums
- Public and commercial infrastructures
- Zoos and greenhouses
- Skylights
- Passenger terminals
- Residential
