# LANDMARK PROJECTS

In each of IASO's landmark projects, the essence of who we are comes through: creators of spaces that inspire and transcend.

These works —designed to challenge the boundaries of textile architecture and sun protection— have become icons of design and functionality.

From structures that engage with light and nature to spaces that redefine the relationship between aesthetics and sustainability, each project tells a story of collaboration, vision, and commitment.

They are far more than technical solutions; they are creations that make a difference, leaving an indelible mark on the landscape and the evolution of their respective disciplines.

---

*Each landmark project of IASO tells a story of innovation, excellence, and overcoming challenges. These works are not only milestones in our journey but also inspiring benchmarks of space transformation.*
