

CARREFOUR CLAIRA SHOPPING CENTER

PROJECT DESCRIPTION

Replacement of the existing upper membrane of the awning (named “S2”). The area to cover, seen from above, is 380m².

The roof will be joined to the structure on an existing system of metal profiles.

Polyester canvas covered with PVC on both sides with the following characteristics: FERRARI ref TX 30 type III, Ferrari brand.

CHARACTERISTICS

Material	PES/PVC
Application	Shoppings
Surface	389m²
Measures	19,77 x 23m
Location	Claira
Client	Carrefour Property Gestion
Year	2018

TECHNICAL DATA

The objective of these inflatable canopies is to indicate the location of the entrances to the Carrefour Clairia shopping centre, and to protect the customers from the rain in these areas.

Following the replacement of two of the four existing canopies, we were requested to replace the upper canvases of the canopy over the S2 entrance, with the objective of bringing a uniform visual appearance to the different entrances.

The TX30 fabric, with its outer protective layer, ensures a better visual appearance of the membrane over the passage of time since it prevents dirt from adhering to the fabric.

In addition and with the architect’s agreement, advantage was taken of this replacement to increase the curvature of the membrane to reduce the tensions in the canvas and improve the fabric’s durability.
