

IASO HEADQUARTERS

PROJECT DESCRIPTION

Integrated into the project to improve and expand the company's headquarters, IASO has renovated the facade using a system of i-tensing textile panels. The aim was to improve the appearance of the building and thermal behaviour.

The modulation of the panels follow the rhythm of the building structure, while the membrane combines a latticed fabric and full material, as well as some vertical strips in a flap shape. This has helped to give the building a new identity.

CHARACTERISTICS

Material	PES/PVC
Application	Infrastructure and equipment
Surface	550m ²
Location	Lleida
Year	2013

IASO® Better Outside
