

SAINTE-CROIX ABBEY

PROJECT DESCRIPTION

Taking advantage of the rehabilitation of the old Abbey, nowadays used as a museum, the decision had been taken to convert the outside cloister in a multipurpose space for both temporary exhibitions and private concerts. The project, originally planned with glass, was replaced by a solution with ETFE cushions for the lightness that this material brings and the consequent savings in foundations and structure it means.

CHARACTERISTICS

Material	ETFE Film
Application	Others
Surface	460m ²
Location	Les Sables d'Olonne
Architect	SABA Architecte
Year	2013

TECHNICAL DATA

3-layer ETFE cushions with solar control.

IASO® Better Outside
